PRODUCT DESCRIPTION

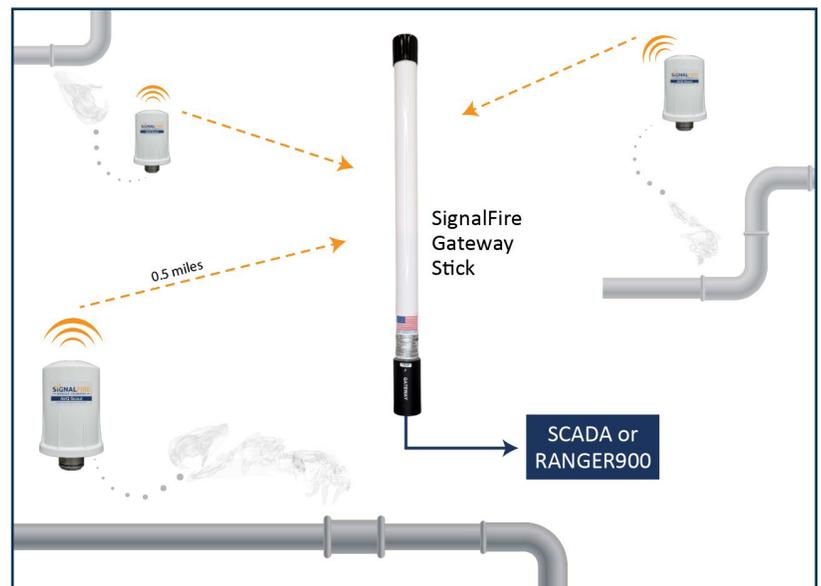

The AIRQ Scout is a modular wireless gas detection platform with integrated RF 900MHz wireless communications.

It monitors the presence of a gas and transmits the measurement wirelessly to a SignalFire Gateway or a RANGER900. The measurements are integrated in a supervisory system using Modbus communication at the gateway. When using the RANGER900, the measurement are transmitted to the SignalFire Cloud using LTE-M CAT M1 / NB-IoT cellular connectivity.

The smart gas sensor is powered from the built-in 72Ah battery. It uses the latest in smart gas sensor technology providing for low power demand, stable and accurate measurement as well as long term stability with little to no calibration required. It automatically compensates for temperature and humidity when sampling a measurement and therefore delivers accurate measurements with low drift. It's low power requirements allow for long battery life.
